

BROADER KNOWLEDGE OF TRADITIONAL MEDICINE BY ROSITA ANDRIES

Dog Seed

I choose these plants because I find it interesting so that the young generating coming behind will have the knowledge and know what we still have medicinal plant in the forest so that when ever this happen to any one where there no health post close by they can use it. I have proof it already. Dog seed milk is use for any insect bit or sting in general. You break off the seed and when the milk comes out apply the same milk on the bite or sting of the insect it stops it less than a minute.

Farming

This is the way we do farming next to our house we don't have to go far to farm. We plant different types of cassava which is the yellow, white, and the sweet cassava. We do planting of our farm so that we can maintain our family lives we don't depend on stuff from the shop, if there is any need to purchase our match and soap we just go to the farm and produce farine or cassava bread and sell and money we earn we buy our needs with the same.

Toyo

This plant is not found any where else but is found on this special area, it was planted by my late father who had pass away years ago. Toyo' is use to stop blood when you get in to accident it is also use to stop having fever You can boil it with lime and lemon and put it in basin and put the little child over the basin and sweat them out. This apply to little child even the big people. I choose this plant because most of the foreign medicine does not work on illness most of the time, so we depend on our local medicine due to the lack of access to the health post.
