Aromata Fruit

This Aromata fruit we use to treat itches and ring worm on our skin. the way in which we use it is by drying it, when it is dry you take and grate it and take out the starch out of it then you soak it with a little of water then apply it to the affected area. The tree is not recommended for fire wood to prepare meal because it is deadly poisonous. So we only use the fruit for our medicine, I find this very helpful and so whenever we have itches we do not go to the health post but we go to our medicinal plant.

Jamoon Bark

I choose to take out the bark of this plant because it serves an important part in our life in terms of health. It is the Jamoon bark. This bark is use for ground itch whenever we have that on our foot or on our children's' feet we go to scrape the bark and squeeze it on the itching part and it heals. The fruit of the same can be eaten or some people make drink with the fruit.

Soap Tree

I choose to take the photo of this very important tree because long ago the people did not had any soap so they depended on this tree, what they did is that they take the bark of the tree pound it and mix it with papaw leaf then they soak their cloth leave it to overnight and the next morning you wash it and you would not believe it washed so clean like if you had washed with bleach, and since the soap came in they do not use that any longer.
